Strong Operating Performance

Strong Solvency and Capital Generation Capacity
Eurozone Economic Outlook

- Positive macro factors for the EU economy in 2015
  - Depreciation of the Euro vs. USD to benefit exporting European corporates
  - Drop in oil price should translate into higher disposable income for households and lower charges for corporates (IMF estimated benefit: ~+0.5% GDP)

- Non-conventional measures by the ECB to re-launch economic growth
  - TLTRO: massive additional liquidity favouring credit development in the Eurozone
  - Quantitative Easing started on 9 March 2015
  - Resulting in prolonged very low interest rates which will be favourable for investments

- The “Juncker Plan”: a €315bn investment plan
  - Allocated to long-term investments & SMEs/Mid-caps

A favourable combination of positive factors to support economic recovery in Europe
